CAREER OBJECTIVE

Computer Science graduate with hands-on experience across software development, business analysis, software testing, and technology-related projects. Possess a strong foundation in programming, system development, database management, and software engineering principles, with practical experience gained through academic projects and industry exposure. Seeking opportunities in Computer Science–related roles where I can apply my technical and analytical skills, contribute to the development and improvement of technology solutions, and continue building my professional knowledge and experience in a collaborative environment

WORK EXPERIENCE

Business Analyst Intern | AmBank Group *April 2026 – Sept 2026*

- Performed User Acceptance Testing (UAT) for enterprise banking applications, validating system enhancements prior to production deployment
- Executed and documented functional, regression, and business-rule testing across multiple banking workflows
- Identified, tracked, and verified software defects in collaboration with business users and third-party vendors
- Validated business requirements through document comparison, UI verification, and workflow analysis
- Analyzed business processes and database relationships to strengthen requirement analysis and testing accuracy

System Automation Intern | Panasonic Industrial Device Malaysia Sdn. Bhd. *Sep 2023 – Feb 2024*

- Engineered Excel-based automation workflows using VBA, and migrated legacy UiPath processes to Power Automate Desktop (PAD)
- Built and maintained SQL queries for data extraction and troubleshooting across production databases
- Monitored live automation servers, diagnosing and resolving workflow errors to maintain operational stability
- Collaborated with engineers in weekly technical syncs to scope, test, and deploy automation improvements
- Documented and tested internal automation systems end-to-end to ensure reliability across handoffs

EDUCATION

Bachelor of Computer Science (Honours) *March 2024 – Sept 2026*

Universiti Teknologi MARA (UiTM) Shah Alam

CGPA: 3.42

Diploma in Computer Science *Oct 2021 – Feb 2024*

Universiti Teknologi MARA (UiTM) Cawangan Johor, Kampus Segamat

CGPA: 3.68

PROJECTS

- **Runway – Full-Stack Job Application Tracking System —** Designed and deployed a full-stack web app using Next.js, FastAPI, PostgreSQL, and Supabase, featuring JWT authentication, an aviation-inspired workflow, and an activity timeline; deployed to production on Vercel and Render.
- **ReadyRescue Web System —** Developed a Java EE web application implementing full CRUD functionality using MVC architecture, integrated with an Oracle database for reliable data management.
- **Book Exchange Mobile Application —** Built an Android app using Kotlin and Jetpack Compose, enabling users to exchange books via authentication, book listings, and cloud-based storage on Firebase.
- **Image Recognition System of Vehicle —** Trained a CNN model with TensorFlow and Keras to classify vehicle types over 20 epochs, using normalized and one-hot-encoded data, evaluated with validation data, and visualized with Matplotlib.
- **BirthdayFriends App —** Created an Android app using Java, XML, and SQLite for adding, updating, and viewing friend profiles with image storage and local data management.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, C, C++, SQL, JavaScript, TypeScript

Web & Frameworks: React, Next.js, FastAPI, HTML, CSS, REST API, JWT Authentication

Databases: PostgreSQL, Oracle Database, MongoDB, Firebase Firestore, SSIS

Cloud & DevOps: Git, GitHub, Vercel, Render, Supabase, Firebase

Automation Tools: Power Automate Desktop (PAD), UiPath, Excel VBA

Testing & Business Analysis: User Acceptance Testing (UAT), Regression Testing, Requirement Validation, Defect Tracking, Business Process Analysis

Data & Analytics: Power BI, RapidMiner

COMMUNITY SERVICE

SULAM Program (UiTM) — Community engagement program for residents of Kampung Budiman, Meru, raising awareness on cyber ethics and responsible digital behavior.
